About the SR&ED Program

To help companies become more competitive, the government offers cash refunds or tax credits between 33% - 69% of the cost involved with the following (*potentially eligible*) projects:

Overcoming the following types of problems typically presents evidence of SR&ED:

- › Overcoming issues associated with the development of light footprint software systems
- › Overcoming issues associated with limited resource hardware platforms (PC, Cell phones, PDAs)
- › Overcoming issues associated with Performance (multi-user, high volume, real-time)
- › Overcoming issues associated with Security (data sharing, user privileges)
- › Overcoming issues associated with concurrency (hosted systems, performance)
- › Overcoming integration issues with hardware and software systems that were not initially designed to be integrated
- › Overcoming issues of integration between different generations of technologies (legacy / State-of-the-art, Mainframe / PC, different dBase generations, Procedural / Object-oriented, etc)

- › Overcoming issues of data synchronization over distributed architectures
- › Overcoming issues of model/architecture abstraction for generalized solutions
- › Overcoming issues associated with data latency

The following are some examples of technologies that have successfully been accepted for SR&ED credits:

- › Development of programming techniques that are unknown to other programmers
- › Architectures for latency minimization on small footprint open source database systems
- › Generalized online messaging technologies
- › Email Client technologies
- › Web based platforms for the normalization and searching of data sets from non-standard sources.
- › Real time and large volume data synchronization mechanisms
- › DataSet managers and synchronizers for combined geodata and non-geodata platforms

- › Lightweight thin client technologies for web delivery of GIS function
- › Dynamic routing platforms (IP-based networks). Footprint and performance algorithmic optimizations for embedded devices
- › General Cryptographic algorithm advancements for multiple platforms
- › Generic POS data collection platforms with trending algorithms
- › Database schema generators
- › Code generators
- › Abstracted data provider layers
- › Adaptive real-time search mechanisms for large scale databases
- › Decision making tools based on predictive and optimization models
- › Extendible state engines for the tracking of networked transactions in multi-media, multi-user environments
- › Polygonal character animation rendering platforms
- › Large scale object replication mechanisms and client/server synchronization techniques
- › Platforms for the processing and wireless communication of information over resource constrained platforms
- › Synchronization layers for portable systems communicating with central server-based repositories
- › Reduced command-set mechanisms for Transaction and Event Processing
- › Online predictive transaction verification algorithms
- › Design of VoIP-based Voice Response Units for high performance IVR platforms.
- › Data synchronization/update mechanisms for combinations of CD-ROM and web based knowledge systems
- › Temporal analysis platforms
- › Email based data tracking and referencing mechanisms across email and web based platforms
- › Common core metaportal technology to allow the creation and management of distributed web sites and web online documents via centralized portal architectures

If any of these situations occurred in your company within the last two years, you could qualify for a cash refund or tax credit. Please contact an Account Manager to arrange a free consultation with one of our SR&ED engineers, to determine the size and eligibility of your claim.

What you can expect from us

Return on Investment Claiming SR&ED is the most profitable activity most of our clients will engage in all year. You can expect a minimum return between \$5,000 and \$10,000 per hour spent with us.

Quick Turn Around Because of our technical depth, you will not have to waste time teaching us your technology. New clients are always impressed at how we can hit the ground running and how little time they have to invest in the process.

Depth of Experience Established in 1999, we are one of the largest independent SR&ED firms in Canada. Our in-house team of Engineers, Scientists and Tax Specialists cover a broad range of technical disciplines and each has more than 10 years of hands on industry experience in their respective fields.

Large but Realistic Claims We prepare 300 + claims each year with a 99% acceptance rate. Less than 5% of our accepted claims are adjusted. The high caliber of our work is well known and documented by CRA. We know exactly what your claim should emphasize and what it shouldn't and we know how far to push the envelope without causing processing delays. You will receive every dollar you are legally entitled to under the SR&ED program, nothing less.

Faster Refunds/Tax Credits Where mutually agreed, we will visit you 2 – 4 times throughout the year to ensure your staff are correctly identifying and tracking eligible projects. This way nothing gets missed, your claims are prepared and submitted with your taxes and you get your refund/tax credit faster.

Training For Your Team We will provide training for your key technical staff so they can better understand what SR&ED is, how to identify it and how to better track it.

What you can expect from us

Templates and Software We will provide free templates and software to help you keep track of SR&ED activities and simplify record keeping.

No Multi-Year Contracts We believe you should always have the freedom of choice and that we should have to earn your repeat business

Seamless Integration with your Accountant
Most Accountants understand that the SR&ED program is first and foremost a science and technology program which is why we have more than 30 Accounting firms referring their clients to us. Our role is not to replace your Accountant but rather work with them to maximize your benefit from the SR&ED program.

Peer Reviewed Claims We have the resources to ensure that every claim is reviewed by at least two subject matter experts prior to submission. This is why our acceptance rate is so high and our adjustment rate is so low. You can be confident your claim was expertly prepared and fully maximized.

Risk Free Engagements Simply put – we don't get paid until you get paid. If preferred however, an hourly rate option is available.

Support For Charities Every year we donate money to a variety of charities. Traditionally we have supported Canadian Breast Cancer Research, Upper Grand Learning Foundation, Anaphylaxis Canada, Heart & Stroke Foundation, Alzheimer Society and local homeless shelters. We do not ask our clients for donations but if you have a favourite charity you would like us to support, please let us know.
